

Career Opportunity

Position Summary

SONOGRAPHER

Responsible for providing ultrasound services to gynecological and obstetrical patients. The ideal candidate is an energetic team player with effective time management and customer service skills.

Our Practice

We address the health care needs of women throughout all stages of life. We provide preventative care, including well-woman and prenatal care, and we deliver babies for both normal and high-risk patients. Our skilled team of highly trained professionals includes 12 board-certified physicians, five nurse practitioners and 8 advanced practice providers which include 3 PAs and 5 APRNs. We are pleased to provide state-of-the-art in-house ultrasound services, innovative menopause management therapies, and an Electronic Health Record (EHR) system.

North Florida Women's Care is Tallahassee's premier women's health medical group. We've provided obstetric and gynecologic services for 32 years. We've received Tallahassee's award for "Best Ob/Gyn Practice" every year since 2011, and were the 2013 Tallahassee Chamber of Commerce's prestigious "Business of the Year."

Our Town

Tallahassee is best known as Florida's state capital, but it's also a bustling small city. Its growing neighborhoods and businesses are thriving. Our city boasts a new, 3,500-seat outdoor music venue, a host of regional cuisine and fine dining options, and plenty of family-friendly outdoor activities. We have college football in the fall, a festival of lights in the winter, and our Springtime Tallahassee event in full bloom. A short drive from our oak-lined canopy roads are the Gulf of Mexico's white sand beaches. Find more information on living and working in Tallahassee at visittallahassee.com

Position Responsibilities

- Review patient's medical history and physician's instructions
- Prepare equipment and select settings
- Explain procedure to patient and record any medical history relevant to the condition being reviewed. Direct patient to move into positions for the best view
- Spread gel on skin to aid transmission of sound waves
- Operate special equipment to direct non-ionizing, high-frequency sound waves into areas of the patient's body
- View the screen during the scan, looking for visual clues that contrast healthy areas with unhealthy ones.
- Select images to show to the physician for diagnostic purposes
- Take measurements, calculate values and analyze results in preliminary reports for physicians
- Keep patient records and maintain strict confidentiality
- Adjust/maintain equipment
- Comply with safety, infection control and quality improvement policies/procedures

Abilities Requirements

- Ability to explain technical procedures and results to patients in a friendly manner
- Ability to calm patients who may be nervous about the procedure
- Ability to use correct body mechanics to appropriately assist patients
- Ability to work independently with minimal supervision
- Ability to multi-task efficiently and effectively
- Ability to establish and maintain effective working relationships with patients, medical staff, management and peers
- Ability to competently use Microsoft Office and an EMR system

Skill Requirements

- Skill in communication and interpersonal interactions
- Skill in performing mathematical and scientific calculations
- Skill in gathering and analyzing patient data

Knowledge Requirements

- Knowledge of medical terminology, anatomy, physiology, instrumentation, basic physics, patient care and medical ethics
- Knowledge of mathematics and science
- Knowledge of safety, infection control, and quality improvement practices to establish a safe work environment

Physical Requirements

- This position requires prolonged periods of standing, walking and sitting, and the occasional need to lift a patient during transfer/turn process with, or without, assistance. Stress may be triggered by workload and complex cases.

Education and Licensing Requirements

- Certification in American Registry of Diagnostic Sonographers
- BLS for Healthcare Providers
- CPR certificate

Experience Requirements

- At least 2 years of experience working as a sonographer

Our Hospital Home – TMH

Our practice is housed within the Azalea Building on the campus of Tallahassee Memorial Healthcare. Our physicians rotate on-call assignments, perform surgeries and deliver babies there. TMH is the only local facility with a neonatal intensive care unit (NICU) and a Baby-Friendly Hospital designation. Our own Dr. Andrea Friall serves as TMH's Chief Medical Officer.
